- 1. For DSE paper to commence in an academic session there should be at least 33% of the strength of the semester.
- 2. The courses provided as an option in DSE will be allotted to students on the availability of infrastructure and faculty members in that particular semester.
- 3. Dissertation and Summer Internship reports will be submitted by the candidate as per the University guidelines. Evaluation of dissertation/summer internship reports will be done as per

Jan My Dan Da On

the guidelines of NEP of MLS University. Dissertation/ Summer Internship under category of special types of delivery of course.

EOES (For Theory):

1. External Exam

	Total	80 Marks	
c.	Section C	20 Mark <u>s</u>	
b.	Section B	40 Marks	
a.	Section A	20 Marks	

2. Internal Exam

20 Marks

M.Sc. Tech Program					
	First Semester				
	Applied Geology				
Code of the course	GEO9003T				
Title of the course	Applications of Tectonics and Structural Geology				
QualificationLevel	NHEQF Level 7.0				
of the course					
Credit of the	4				
course					
Type of the course	Discipline Centric Core Course (DCC)				
Delivery type of	Theory& Lecture				
the course					
Prerequisites	M.Sc. with Geology				
Co-requisites	None				
Objectives of the	Accurate geometric description of the structures observed in				
Course	naturally deformed rocks. Understanding deformation				
	mechanisms at macroscopic and micro- meso scales.				
Learning	Students are supposed to learn the techniques of recording and				
outcomes	analyzing structural data and to map rock sequences in the field				
	and interpret a region to determine how it formed and what has				
	happened to the area since formation. To come out with the				
	application of structural geology in various diverse fields of				
	Geology.				
	Syllabus				
UNITI	Plate Tectonics				
	Precambrian plate tectonics. Orogenic Belts. Supercontinent Cycle. Mechanism of Plate Tectonics. Plate boundaries in relation to				
	extensional, compressional and transpressional tectonics.				
	Implications of Plate tectonics: Environmental change, Mineral				
	deposits, sedimentary basins, geothermal power, natural hazards.				
UNIT II	Seismology				
	Seismic waves, earthquake mechanism, tomography,				
	Inter-plate and Intra-plate seismicity. Reservoir induced Seismicity.				
	Seismic Hazards. Himalayan Earthquakes. Neotectonic: Evidences with				
TINUT III	examples.				
UNIT III	Deformation Processes Deformation in relation to strain and stress. Behaviour of rocks under				
	stress, Finitehomogenous deformation, Progressive Deformation.				
	Strain measurements. Role of fluids in deformation processes.				
UNIT IV	Microstructures				
	Types, Orientation, Slip & Rotation. Static and Dynamic				
	Recrystallization and their effects. Lattice Preferred Orientation,				
	Dilation sites, Porphyroblasts and Reaction rims. Controls of strain				
	rate and temperature on microstructures.				
UNIT V	Structural Analyses				
	Time relation between crystallization and deformation. Basement				
	Cover relationship. Criteria of recognition of polyphase deformation.				

Jan H MONO

	Rotation of structural elements and interfering patterns of folds on
	outcrop scale.

Jan K Jun SV Ost

	M.Sc. Tech Program
	First Semester
	Applied Geology
Code of the course	GEO9004T
Title of the course	Applications of Palaeontology And Stratigraphy
Qualification Level	NHEQF Level 7.0
of the course	
Credit of the course	4
Type of the course	Discipline Centric Core Course (DCC)
Delivery type of the	Theory & Lecture
course	
Pre requisites	M.Sc. with Geology
Co - requisites	None
Objectives of the	It is aimed to make understand the application and Significance
Course	of paleofauna's and paleoflaura.
	• It is aimed to make understand of Earth's geological history
	through this paper by pertaining knowledge of lithology,
	crustal evolution and geochronology.
Learning outcomes	Students are expected to carry with them knowledge based
	upon geochronological sequence of rock layers all over during
	the earth's history. The knowledge imparted will bear
	characterization of Stratigraphic rocks with respect to
	lithology, structure, extension, location, age & life preserved,
	if any.
	Students are expected to get knowledge to find fauna and
	flaura in the stratigraphic sequence and able to put these in an
	evolutionary trend.
UNITI	Syllabus Organic Evolution
OIVIT)	Origin of Life, Punctuated equilibrium and Phyeletic Gradualism
	Models. Palaeoecology, Palaeobiogeography. Taphonomic
	considerations. Mass extinctions
UNIT II	Applications of Microfossils
	Microfossils: Types & Significance. Usage in seafloor tectonism,
	Oxygen and Carbon isotope studies of microfossils. Palaeoclimatic
	and Paleogeographic inferences from microfossils.
UNIT III	Palyonology
	Geological history and morphology of pollen grains. Palyonology in Petroleum, Coal and CBM exploration.
UNIT IV	Stratigraphic applications
OTAL IV	Magneto-stratigraphy, Chemostratigraphy, Bio-stratigraphy, Methods
	of Palaeogeographic reconstruction. Sequence stratigraphy through
	Carbon, Oxygen and Sulphur stable isotopes.
UNIT V	Geochronology
	Pb-Pb, U-Pb, Sm-Nd, K-Ar, Ar-Ar and Rb-Sr dating methods and
	their applications. Quaternary dating methods: Radiocarbon dating,

Sport Dress

	luminescence, uranium series & amino acids

Objectives of the	To develop concepts and applications of Remote Sensing and			
Course	GIS in Geology.			
Learning outcomes	Upon successful completion of course the students would be able to:			
	 To understand the characteristics of various sensors and 			
	satellite missions.			
	To understand the role of remote sensing and GIS in			
	Geological studies.			
	To understand the concepts of Microwave, Thermal and			
	Hyperspectral Remote Sensing and its applications.			
	To develop concepts of GIS and its applications.			
	Syllabus			
UNIT I	Introduction to Remote Sensing			
	Principles and significance; Electromagnetic Radiation –			
	Characteristics and Remote Sensing Regions and bands; Spectra of			
	common natural objects – soil, rock, water and vegetation; General Orbital characteristics of satellites; Concepts of radiometric, spectral,			
	spatial and temporal resolutions of satellite sensors.			
UNIT II	Microwave and Thermal Remote Sensing			
	Sensor characteristics of remote sensing satellites: Landsat, IRS,			
	ASTER, Quickbird, Microwave remote sensing, Thermal and infrared			
	remote sensing and their applications.			
UNIT III	Hyperspectral Remote Sensing			
	Introduction to Hyperspectral Remote Sensing, Imaging Spectrometers, Spectral Libraries, Hyperspectral Sensors,			
	Applications of Hyperspectral Remote Sensing in Geology.			
UNIT IV	Digital Image Processing			
	Image rectification and restoration; Image enhancement, contrast			
	stretching, filtering, Image rationing; Image classification and			
	accuracy assessment - supervised & unsupervised classification, error			
	estimation; Data merging and GIS integration.			
UNIT V	Concept of GIS			
	Definition and components of GIS; Raster, vector, Spatial and non

course					
Pre requisites	M.Sc. with Geology				
Co - requisites	None				
Objectives of the	To learn the practice of theoretical knowledge for applying at				
Course	ground observation in field and to learn essential observational				
	and practical skills				
	Students with physically observed the rocks, it will help them				
	to identify rocks in the field and build a tectonic model.				
	Students get idea about the fauna and learn to calculate the age				
	through isotopes.				
Learning outcomes	To train the students for adaptation in field work environment				
Tree .	in certain professional and scientific organizations. Students				
	will have knowledge which will be imparted through field				
	trips. Students are expected to learn different deformational				
	structures.				
	Study will help students in the field to work on rocks.				
	Faunal study will help them to identify fauna in the field and				
	to put these in the evolutionary sequence.				
	Syllabus				
	Applications of Tectonics and Structural Geology				
	1. Solution of structural problems by stereographic and				
	orthographic projections / Plot Series Maps.				
	2. Identification of structural elements and their chronology in				
	hand specimen.				
	3. Structural analysis with stereonet: S- pole and beta- pole				
	diagrams; Fold axis and axial plane; Countoured diagrams;				
	Methodology and interpretation of patterns.				
	4. Interpretation of complex geological maps and drawing of				
	cross section.				
	Applications of Palaeontology and Stratigraphy				
	1. Age calculation exercise through various Isotope dating				
	methods				
	2. Lab Study of rocks				
	,				

John K Dan A. Q.

3. Lab study of Microfauna 4. Isotope study of faunas for age calculation exercises. Compulsory Field Training Program: Geological Field Training mainly based on Structural Mapping.- 10 days duration. Note: Compulsory field training program at the end of every semester will be value added part of the practical syllabus which will be of 10 days duration and students opting out of it will loose proportional marks from the practical credit score. The student will have chance to improve the score by doing the field training at his/her own expenses before the commencement of final practical exam and after producing valid certificate from the recognized institute/company duly approved by the field training mentor/faculty member. 1. Ramsay, J.G., and Hill, Mc. Graw., 1967, Folding and Books suggested for reading Fracturing of rocks 2. Park, R.G., 1997, Foundations of Structural Geology, 3rd 3. M.Sc. Tech Program		
	First Semester	
	Applied Geology	
Code of the course	GEO9116T	
Title of the course	Exploration Geochemistry - Geophysics & Legislation in Mineral Industry	
Qualification Level	NHEQF Level 7.0	
of the course		
Credit of the course	4	
Type of the course	Discipline Specific Elective (DSE)	
Delivery type of the course	Theory & Lecture	
Pre requisites	M.Sc. with Geology	
Co - requisites	None	
Objectives of the	The objectives of this course are to:	
Course	• Familiarize with procedures and techniques of mineral exploration.	
	• Understand the geochemical and geophysical methods applied in mineral exploration.	
	•Understand various rules and regulations related with mineral industry in India, and.	
	Increase and update the knowledge and skills required by geoscientists for the exploration and exploitation of mineral	
	deposits.	
Learning outcomes	On completion of this course, students will be able to: •Understand the principles, techniques and application of geochemical and geophysical methods in mineral exploration •Understand the various applicable rules and regulations which are related to mineral industry in the country	
	Syllabus	
UNIT I	Introduction	
UNITI	Introduction to Mineral Exploration, Mineral Policies across the world, Classification of mineral deposits, Industry Specifications.	
UNIT II	Exploration Geology Introduction to Exploration Geology, Regional Planning and Organization, Surface Guides, Survey and Mapping. Geological exercises in mineral exploration.	
UNIT III	Exploration Geochemistry Exploration Geochemistry: Distribution and dispersion of elements, Background and threshold values, Orientation Survey, Standard Operation Procedures in Geochemical Exploration, AnalyticalMethods, Data Interpretation and Geochemical Methods of Mineral Exploration.	
UNIT IV	Exploration Geophysics Exploration Geophysics: Introduction to geophysical methods, Seismic survey (Reflection and Refraction methods), Gravity survey,

M.Sc. Tech Program		
Second Semester		
Applied Geology		
Code of the course	GEO9006T	
Title of the course	Advanced Mineral Exploration and Mining	
Qualification Level	NHEQF Level 7.0	
of the course		
Credit of the course	4	
Type of the course	Discipline Core Course (DCC)	
Delivery type of the	Theory & Lecture	
course		
Pre requisites	M.Sc. with Geology	
Co - requisites	None	
Objectives of the Course	This course is designed to enable students to acquire understanding of the advance concepts of mineral exploration, exploration techniques including ground and aero geophysical surveys, geochemical exploration, etc., knowledge of application of ore petrography.	
Learning outcomes	 Upon successful completion includes development of ability to apply knowledge-based approach for mineral exploration and capacity to judge better use of specific tools for mineral targeting unique to the selected mineral under consideration. 	
	Syllabus	
UNITI	Mineral Exploration Ore search and guides. Drilling for geological information, Planning of drill holes and logging of drill hole data. Different types of techniques for delineating potential alteration zones for mineral exploration and rock identification.	
UNIT II	Sampling Sampling ore bodies and Estimation of ore reserves. Examination and evaluation of prospects and mines. Fundamentals of geostatistic applications. Consulting Geologists: Certificates and courses from various govt and autonomous organizations	
UNIT III	Exploration Geophysics Fundamentals of geophysical prospecting, Methods and Application. Air borne and Ground geophysical surveys, Planning and coordinating geophysical work.	
UNIT IV	Exploration Geochemistry Principles of geochemical prospecting. Exploration geochemistry sequence, Methods and application. Field and Laboratory analytical methods (Assaying methods.) Treatment of geochemical data.	
UNIT V	Mining Geology Gathering and presenting geological data including geologic mapping in underground mines. Mining Methods: Open Cast and Underground	
Books suggested for reading	 Charles, Moon., Michael, Whateley, K.G., and Anthony, M. Evans., 2009, Introduction to Mineral Exploration, 2nd Edition, ISBN: 978-1-444-30912-6 March 2009 Wiley-Blackwell. Reedman, J. H., Techniques in Mineral Exploration, 1st

course		
Pre requisites	M.Sc. with Geology	
Co - requisites	None	
Objectives of the	To impart applied knowledge of groundwater resources and its	
Course	occurrence, movement, exploration and management.	
Learning outcomes	On successful completion of the course, students will be able	
	to understand the role of groundwater and its occurrence,	
	movement, exploration & management.	
	Syllabus	
UNITI	Introduction to Groundwater	
	Ground water Geology: Elements of ground water hydrology. Source	
	of ground water and origin. Hydrologic cycle. Occurrence and	
	distribution of ground water. Hydrological properties of water bearing materials. Porosity, Permeability, Transmissibility, Storage	
	coefficient, Specific yield, Specific retention.	
UNIT II	Occurrence of Groundwater	
	Occurrence of ground water in different types of rocks-igneous,	
	metamorphic and sedimentary (Soluble, non-soluble and non-	
	indurated sedimentary).	
UNIT III	Water Table Fluctuations	
	Water table; Important causes of fluctuation. Water table maps,	
	methods of their construction and their interpretation. Fresh and Salt	
XINTYOU XXZ	water relationship in coastal areas.	
UNIT IV	Exploration of Groundwater Exploration of ground water by various methods: Geological	
	methods, Hydrological methods, Geophysical methods. Wells –	
	Different types of wells and equipment of their construction. Use of	
	well hydraulics; Well characteristics and their determination.	
UNIT V	Conservation and Management of Groundwater	
	Use and conservation of ground water. Artificial recharge of ground	
	water. Basin-wise development of groundwater in Indian	
	subcontinent. Groundwater provinces of India and Rajasthan.

Objectives of the	To give students, practical aspects of the groundwater		
Course	resource and its management.		
	As per the objectives defined in Advanced Mineral		
	Exploration theory paper with the aim to develop practical		
	skills.		
Learning outcomes	On successful completion of the course, students will be able		
	to understand the role of groundwater and its occurrence		
	movement, exploration and management and also about		
	advance mineral exploration procedure and mining methods.		
	As per the outcomes defined in Advanced Mineral		
	Exploration theory paper with relevance to practical aspects.		
	Syllabus		
	Applied Hydrogeology		
	1. Groundwater Contouring: Preparation of water table contour		
maps; Calculation of porosity, permeability, yield; Pumping test exercises; Exercises on Graphical representation of chemical quality of groundwater.			
			Advanced Mineral Exploration and Mining
	1. Survey and leveling by Theodolite and related problems.		
	2. Estimation of ore reserves.		
	3. Site selection for bore-holes.		
	4. Basic knowledge and handling of GPS.		
	Viva – Voce		
	Field work		
	Record		
	Compulsory Field Training Program: Geological Field Training		
	mainly based on Hydrogeology and Mineral exploration.		
	Note: Compulsory field training program at the end of every		
	semester will be value added part of the practical syllabus which		
	will be of 10 days duration and students opting out of it will loose		
	proportional marks from the practical credit score. The student		

South for DOD

	will have chance to improve the score by doing the field training at his/her own expenses before the commencement of final practical exam and after producing valid certificate from the recognized institute/company duly approved by the field training mentor/ faculty member.
